

Eleutherian Works.

SODA HOUSE - UPPER YARD

The New Soda House built on the R.R. spur from Montchanin into the Eleutherian Works - this building was used for storing and pulverizing Nitrate of Soda having been built in the late Eighties and took the place of the Acid Works building farther down the yard near the Refinery that was used for the same purpose before this one was erected - See remarks on the

"Acid House" picture

This is in the "Wilderness" section of the Eleutherian Works, the Coal House is on the left (not in the picture) - a little farther along on the same R.R. spur -

See remarks on the Coal House picture
